# Visual identificaton of anomalies

## ■ Goals

- Examine behavior
- Find anomalies

## ■ Approach

- Hierarchical consumption model
- Predict values
- Compare with measured data

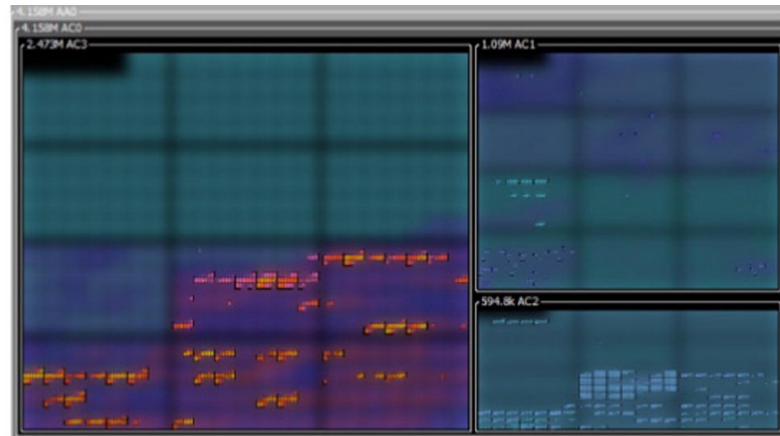

# Main steps

Time series

Anomaly detection

Pixel-based time series & anomaly visualization

# Anomalies

## ■ Prediction-based approach

- Weighted prediction for values

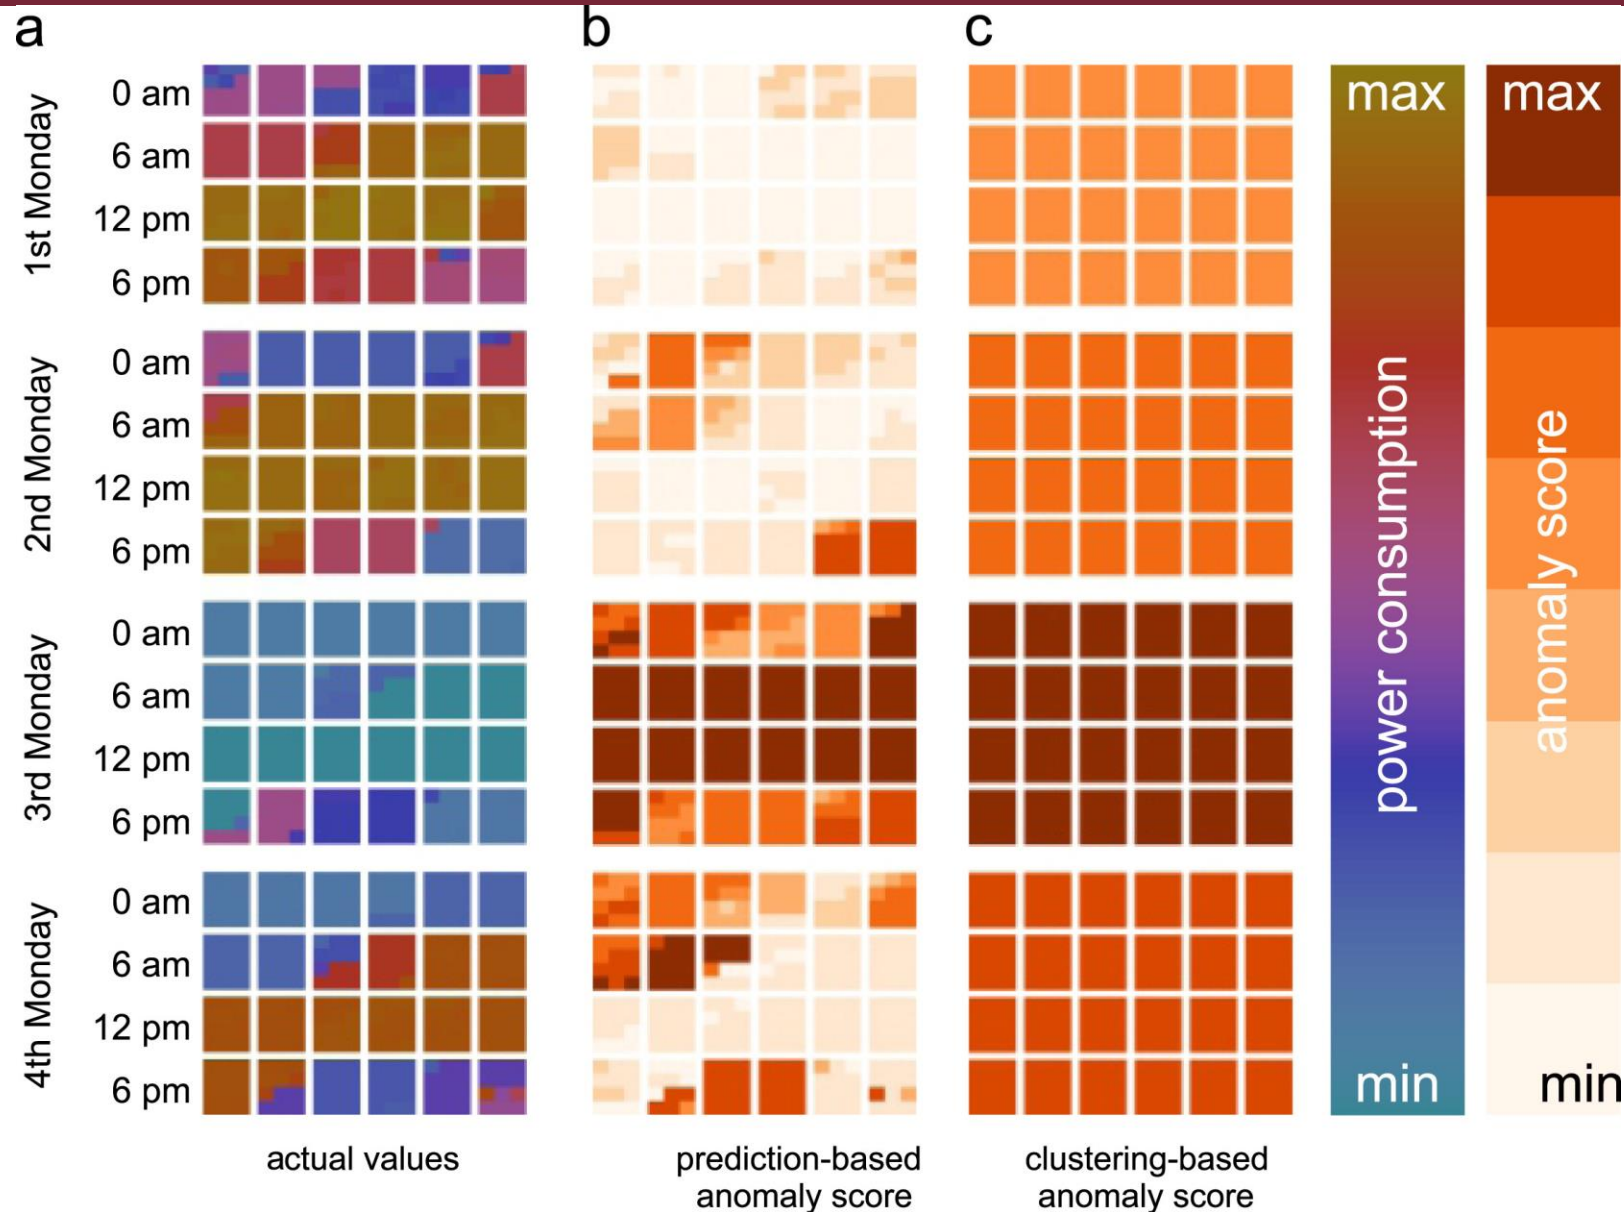

$$anomaly[time] = \frac{|predVal[time] - obsVal[time]|}{avg_{t \in Time} (|predVal[t] - obsVal[t]|)}$$

- Is the consumption close to predicted?

## ■ Clustering-based methods

- Daily data transformed to a multi-dimensional representation
- „Density” of points is considered
- Are there similar days?
