

# Software Verification and Validation (VIMMD052)

## Exam Topics in 2019

1.	<ul style="list-style-type: none"><li>• The notion of verification and validation. Overview of the typical verification and validation activities during software development.</li><li>• Efficient verification of complex systems by symbolic model checking.</li></ul>	<ul style="list-style-type: none"><li>• L01</li><li>• L08</li></ul>
2.	<ul style="list-style-type: none"><li>• Basic formalisms for modelling behaviour: Kripke Structure, Kripke Transition System, Labelled Transition System, Timed Automata.</li><li>• Formal relations for refinement checking: “may preorder” and “must preorder”, their relationship with testing.</li></ul>	<ul style="list-style-type: none"><li>• L04</li><li>• L22</li></ul>
3.	<ul style="list-style-type: none"><li>• Verification of the software requirement specification: criteria and techniques.</li><li>• Verification of invariant properties by bounded model checking.</li></ul>	<ul style="list-style-type: none"><li>• L02</li><li>• L08</li></ul>
4.	<ul style="list-style-type: none"><li>• Verification of the software architecture design: criteria and techniques.</li><li>• Formalization and checking of requirements using HML and linear temporal logics (LTL).</li></ul>	<ul style="list-style-type: none"><li>• L03</li><li>• L05, L06</li></ul>
5.	<ul style="list-style-type: none"><li>• Verification of the detailed design: criteria and techniques. Categorization of the typical techniques of formal verification.</li><li>• Model based test case generation by model checking and bounded model checking.</li></ul>	<ul style="list-style-type: none"><li>• L04</li><li>• L21</li></ul>
6.	<ul style="list-style-type: none"><li>• The role of development standards in the verification and validation of critical systems.</li><li>• Software model checking: The counterexample guided abstraction refinement (CEGAR) approach with predicate abstraction.</li></ul>	<ul style="list-style-type: none"><li>• L02</li><li>• L17</li></ul>
7.	<ul style="list-style-type: none"><li>• Verification of program source code: criteria and techniques.</li><li>• Model checking of time dependent behaviour: basic modelling formalism (timed automata) and timed temporal logic.</li></ul>	<ul style="list-style-type: none"><li>• L14</li><li>• L10</li></ul>
8.	<ul style="list-style-type: none"><li>• Specification based testing of software modules: test design techniques.</li><li>• Correctness criteria and basic strategies for proving program correctness.</li></ul>	<ul style="list-style-type: none"><li>• L18</li><li>• L15, L16</li></ul>

9.	<ul style="list-style-type: none"> <li>• Structure based testing of software modules: test coverage criteria.</li> <li>• Formal relations for checking behavioural equivalence: Strong bisimulation and weak bisimulation (observational equivalence).</li> </ul>	<ul style="list-style-type: none"> <li>• L18</li> <li>• L13</li> </ul>
10.	<ul style="list-style-type: none"> <li>• Model based test case generation techniques: graph based algorithms.</li> <li>• Model checking of stochastic properties: basic modelling formalism and temporal logic (Continuous Stochastic Logic).</li> </ul>	<ul style="list-style-type: none"> <li>• L21</li> <li>• L11</li> </ul>
11.	<ul style="list-style-type: none"> <li>• Software integration testing techniques.</li> <li>• Formalization and checking of requirements using branching time temporal logics (CTL* and CTL).</li> </ul>	<ul style="list-style-type: none"> <li>• L20</li> <li>• L07</li> </ul>
12.	<ul style="list-style-type: none"> <li>• Verification during software maintenance: criteria and techniques.</li> <li>• Source code based test input generation by symbolic execution.</li> </ul>	<ul style="list-style-type: none"> <li>• L23</li> <li>• L19</li> </ul>
